

A Dataset on the Socio-economic and Behavioural Impacts In Sri Lanka Through Multiple Waves of COVID-19

Outcome - A large **3020 household** survey was conducted to ascertain the socioeconomic impact and human behaviour changes due to the pandemic and containment strategies covering all provinces of Sri Lanka. The ramifications on mobility, income, economic status, food consumption, education, access to health services and information, and cultural and psychological impacts were explored.

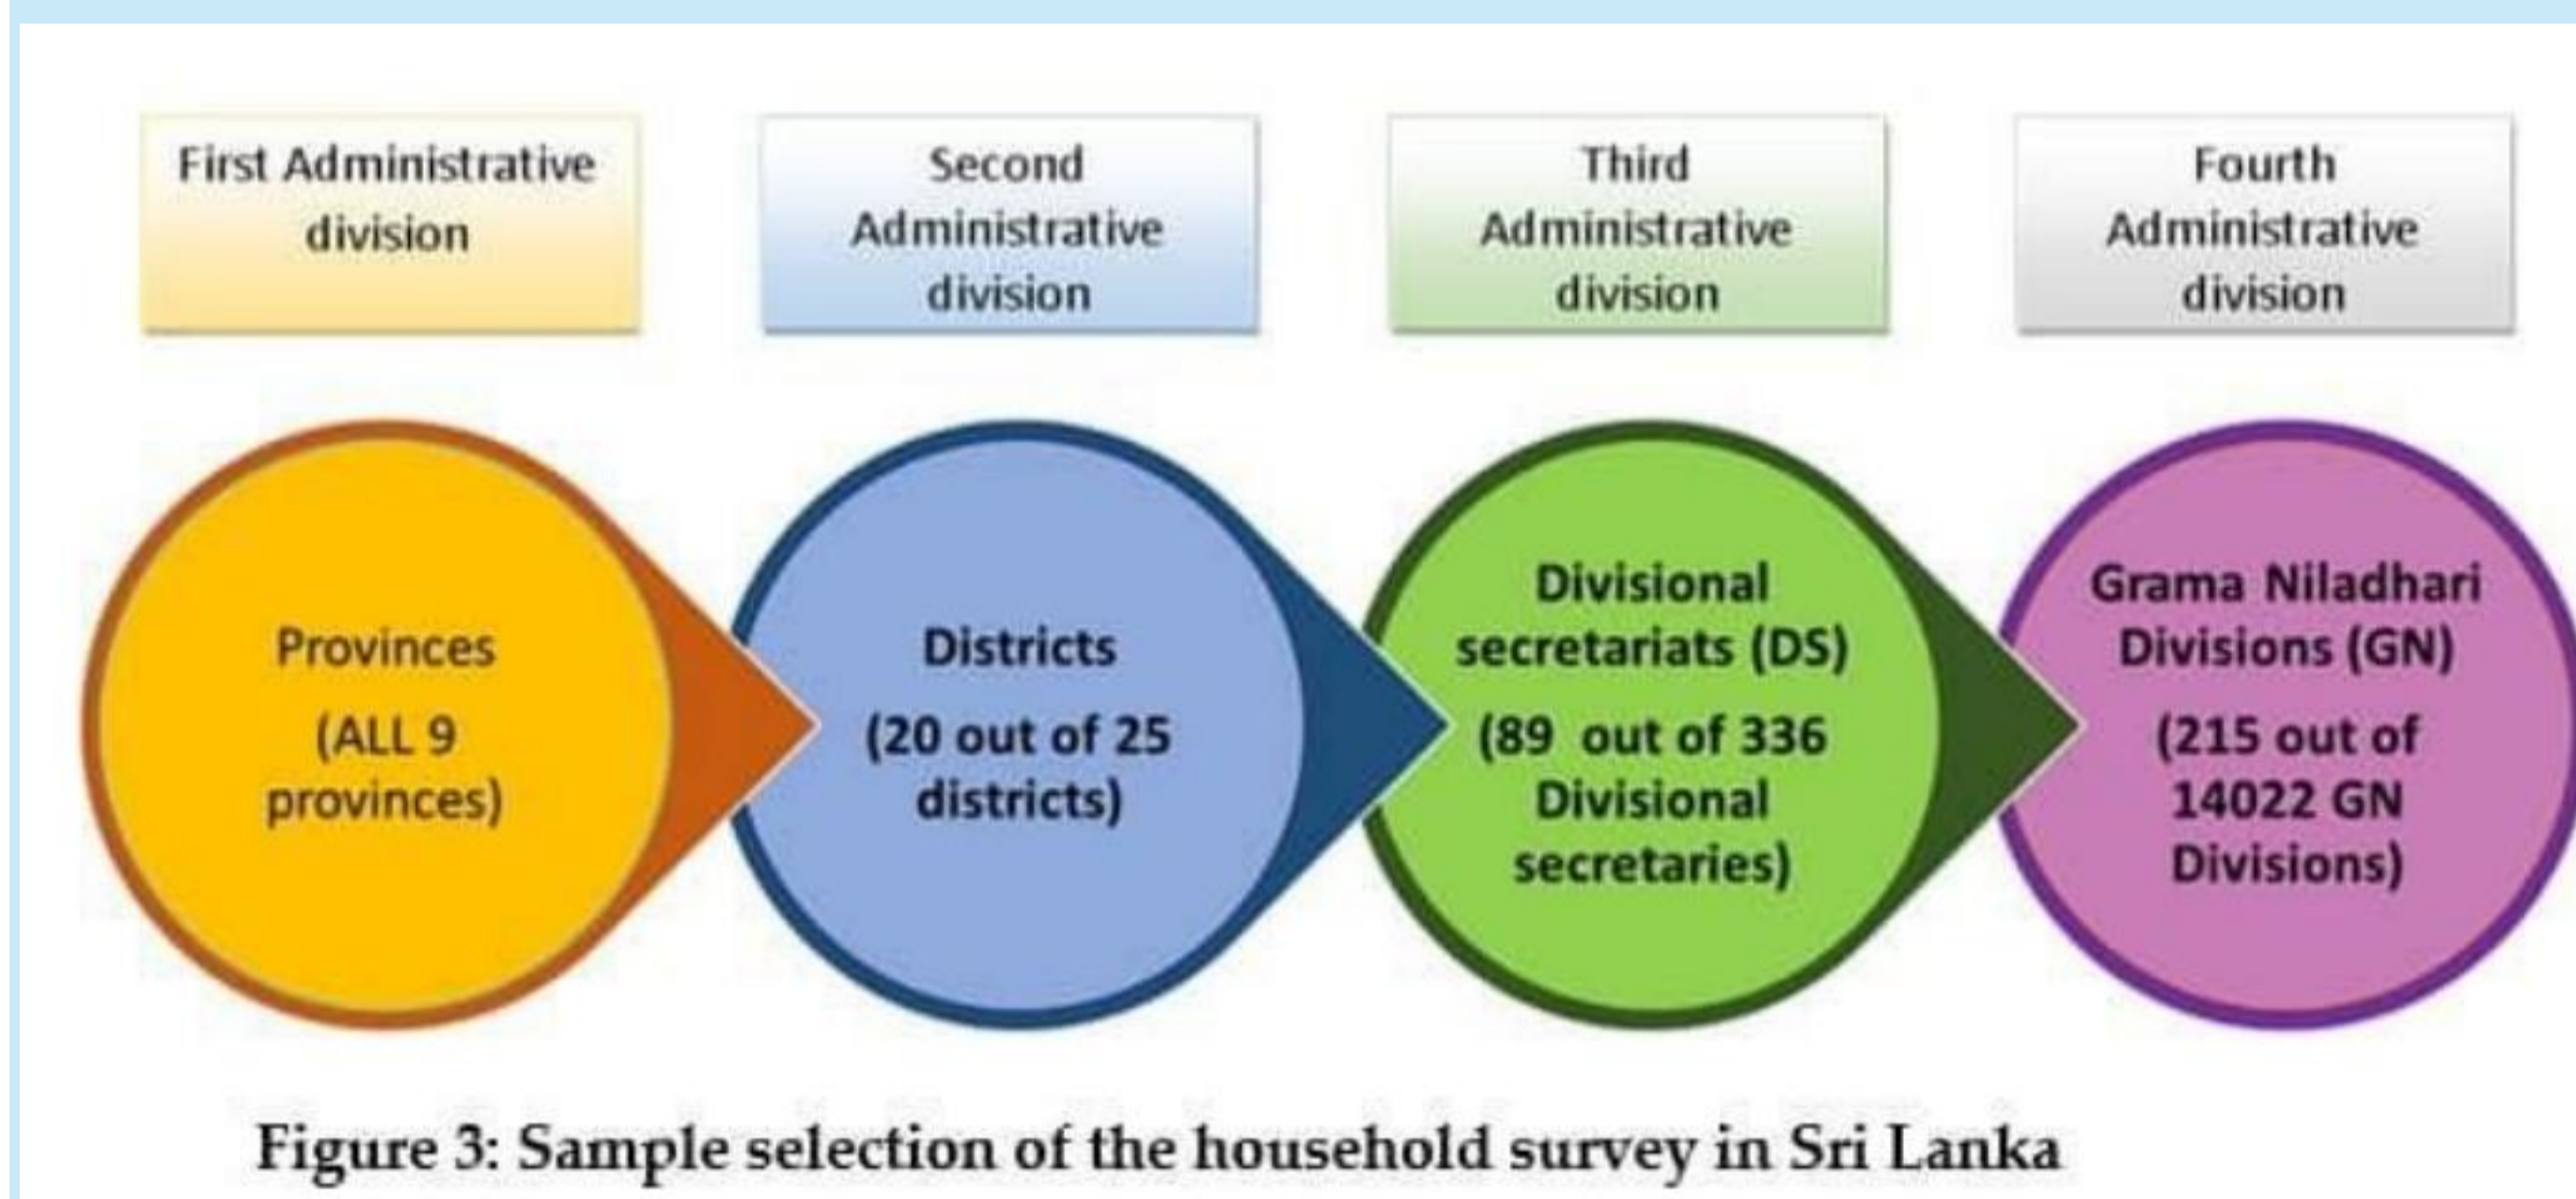

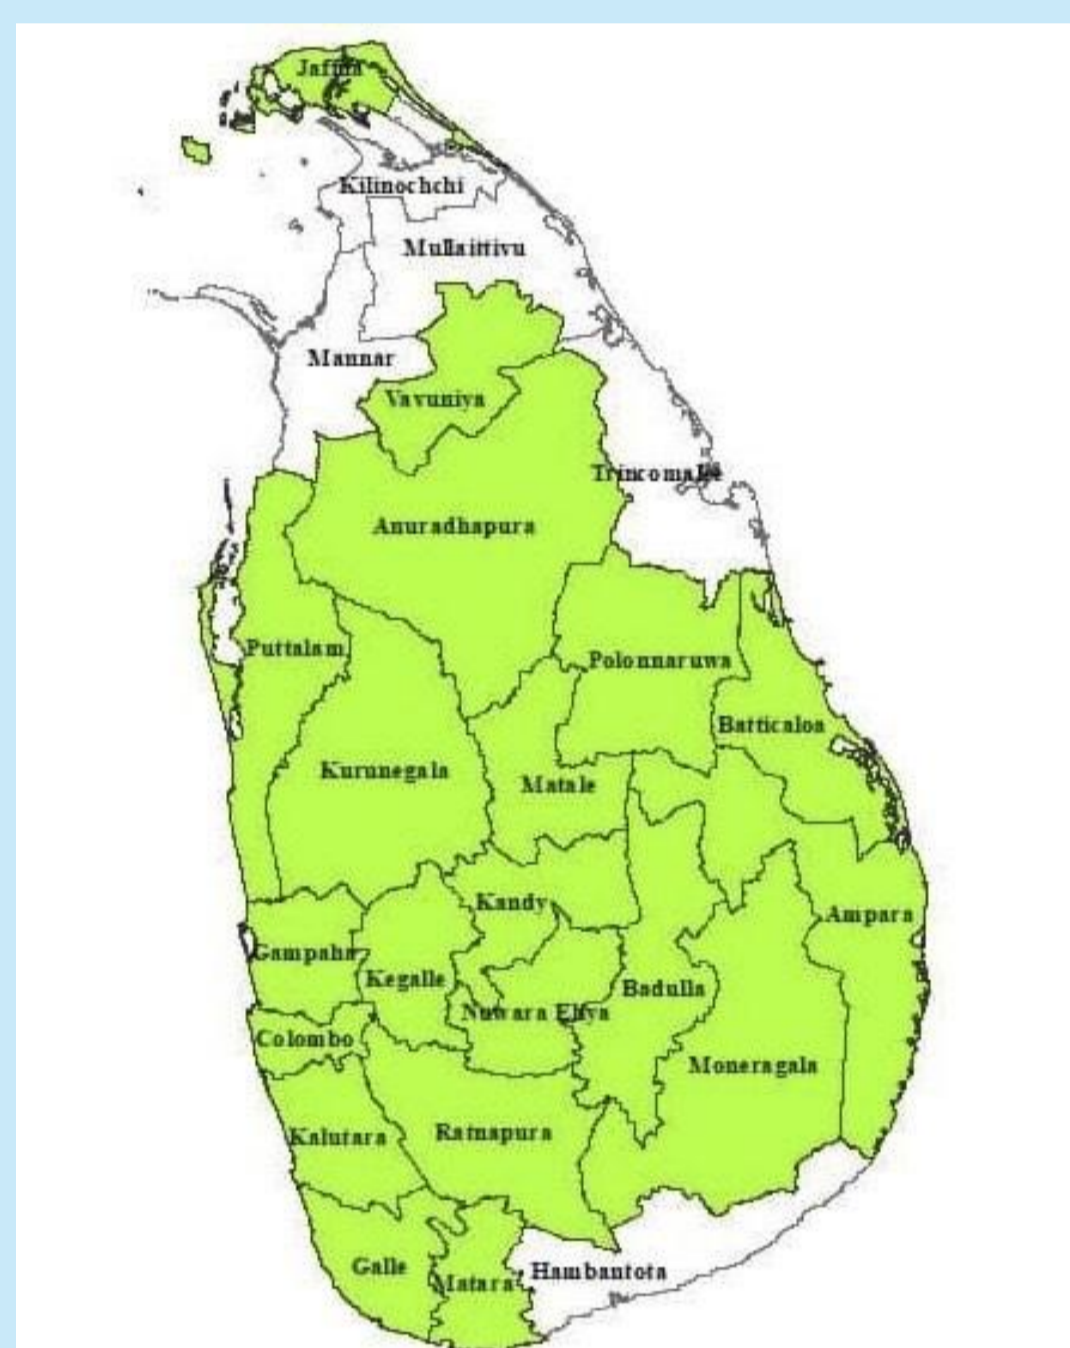

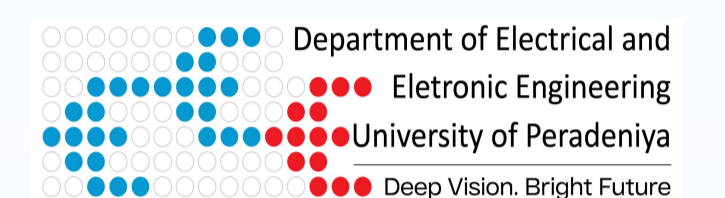

Impact - Enables the identification of underlying conditions that affected education, impact on society in terms of psychology, health and nutrition, and economic status.

Team and Collaborators

- J. Ekanayake [Professor at DEEE]
- R. Godaliyadda [Professor at DEEE]
- P. Ekanayake [Professor at DEEE]

- S. Ekanayake [Professor in Education]
- M. Pinnawala [Professor at Dept. of Sociology]
- S.Dharmarathne [Institute of Policy Studies, Colombo]

RA's and Students

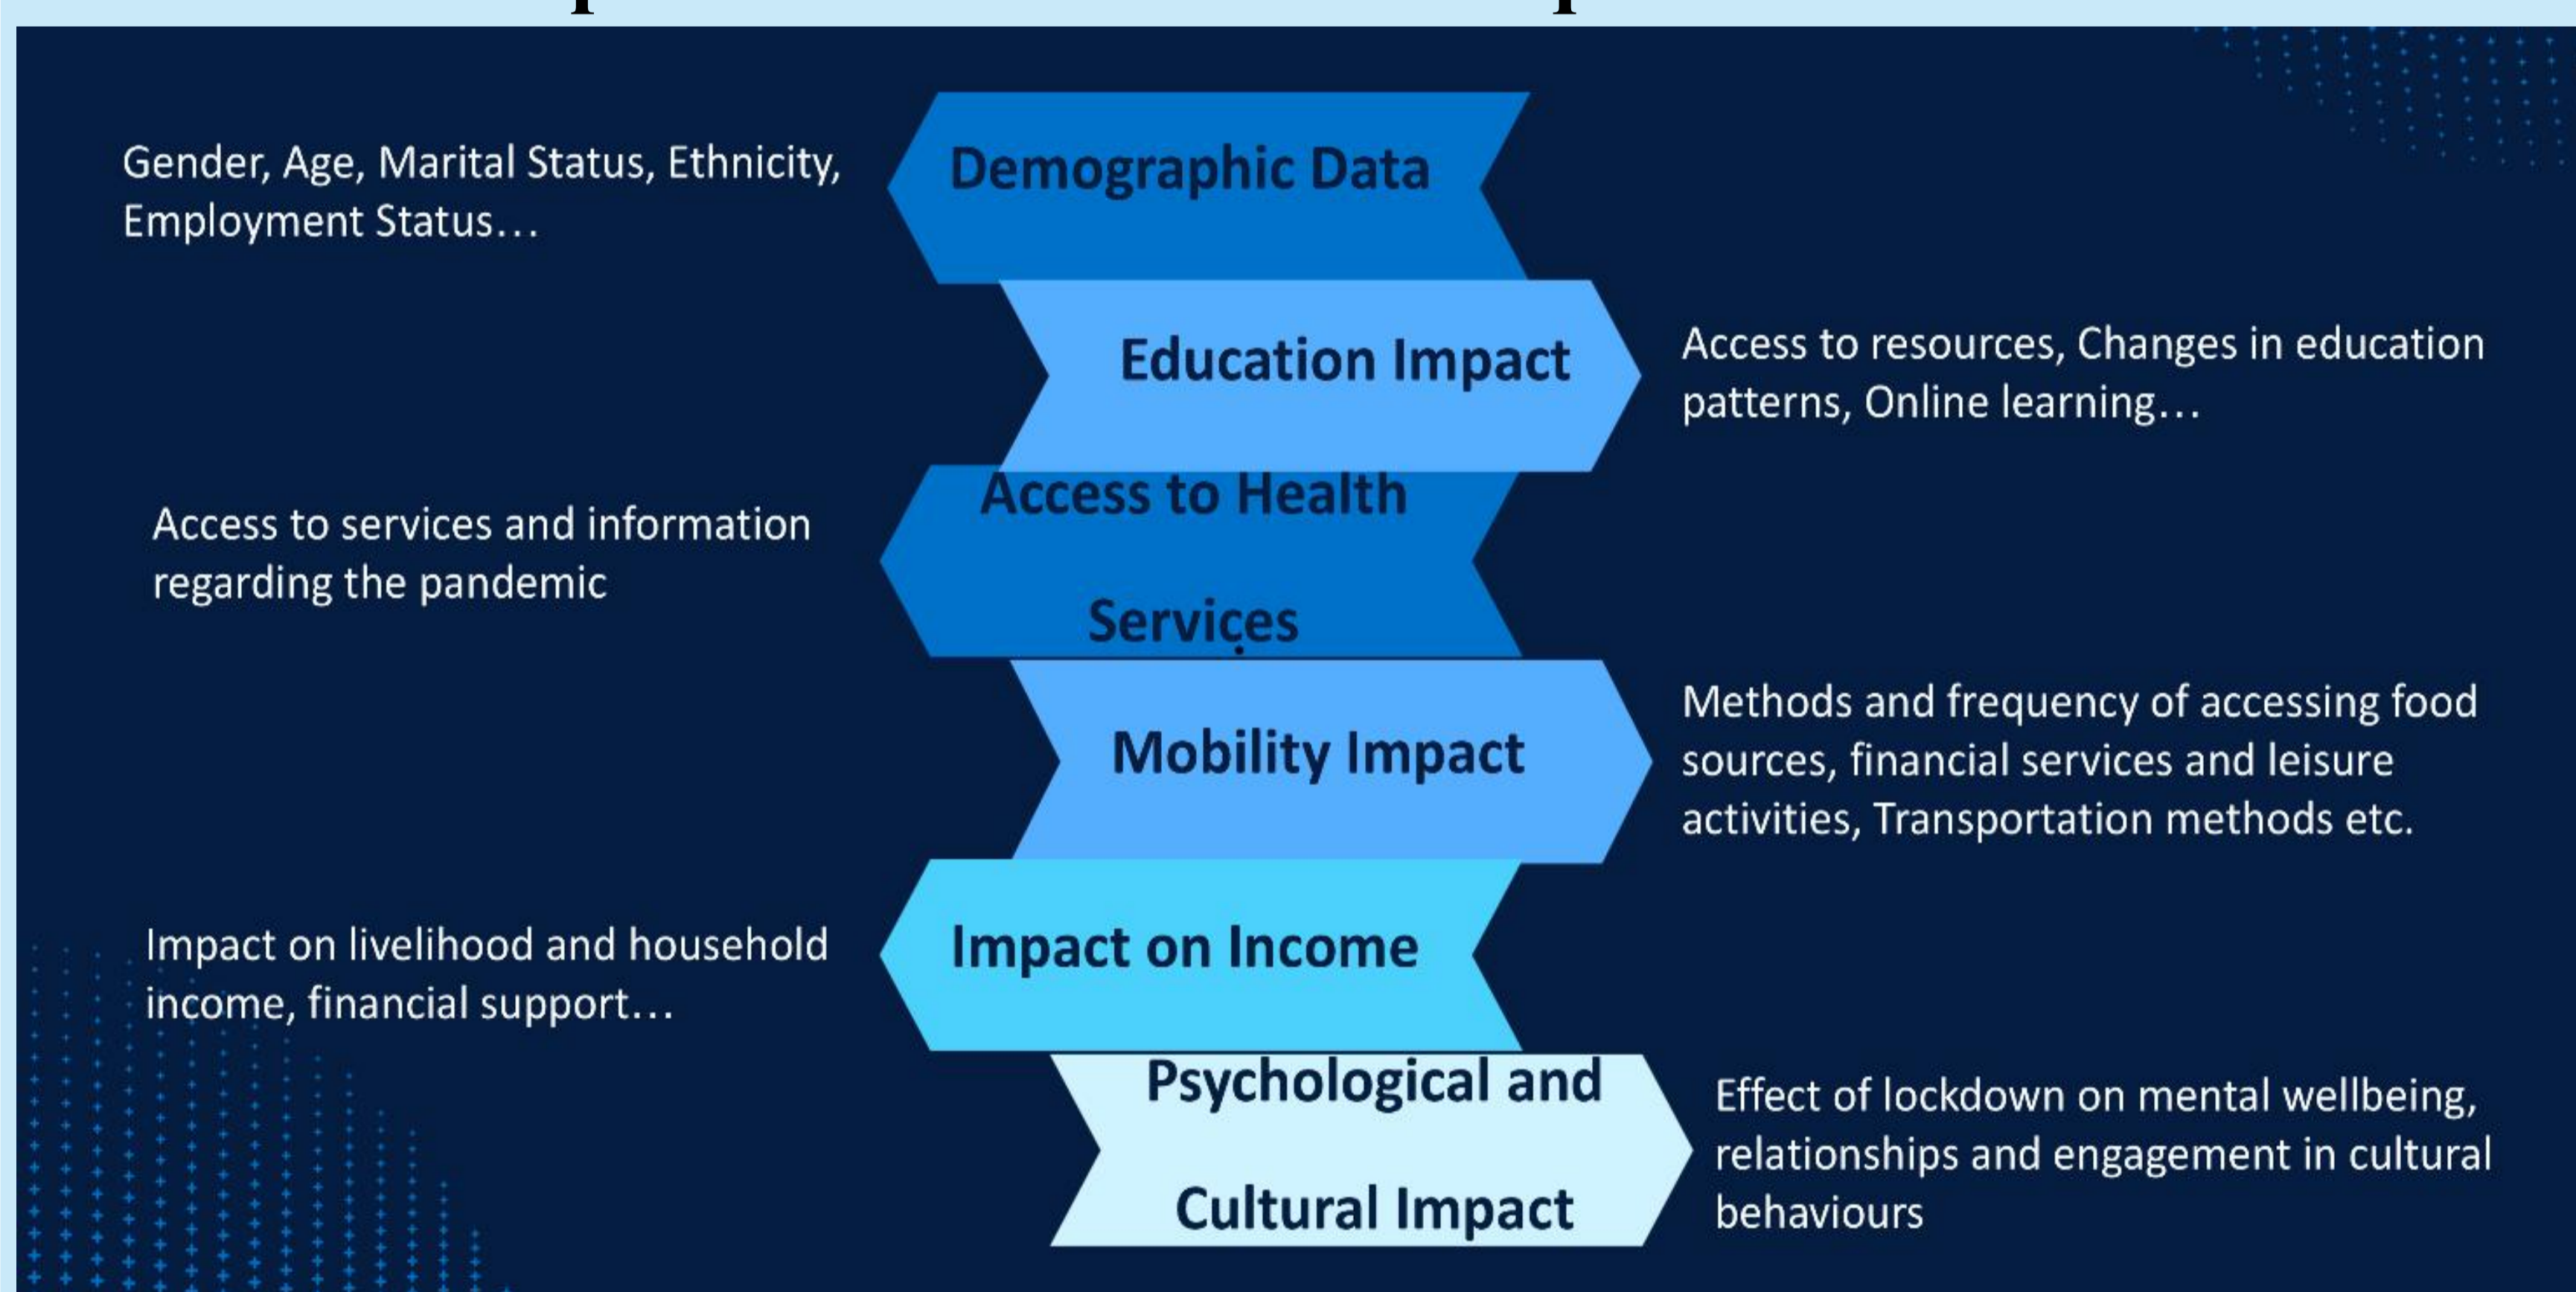

- I.Thilakasiri
- T.Fonseka
- I.Yapa
- *add nayani's name

The data collection journey included;

- Household surveys
- In-depth Interviews
- Focus Group Discussions
- GPS Trajectory Collection

Impact Areas covered in the questionnaire:

Overview of few Demographic Statistics

Gender	Survey Population (%)	Sri Lankan Population (%)
Male	29.3	48.4
Female	70.7	51.6

Ethnicity	Survey Population (%)	Sri Lankan Population (%)
Sinhalese	59.5	74.9
Tamil	19.6	15.3
Muslim	20.6	9.3
Other	0.3	0.5

Significance of the Dataset

- Ability to assist policymakers in a more holistic approach to future pandemic-related decision making
- Gauges effectiveness of containment strategies
- Identification of impact of pandemics on diverse groups in the population
